## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of claims 5-7, 10-13, 15, 19, 26, 29 and 30 in Paper No. 10 and the supplemental response to restriction requirement is acknowledged.

### ***Specification***

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed, a device.

The following title is suggested: Active matrix substrate and display device.

### ***Claim Objections***

Claims 10, 15, 19, 26 and 29 are objected to because of the following informalities: these claims need corrections because they depend on non-elected claims 1 and 3. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 5-7, 10-13, 15, 19, 26, 29 and 30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The limitation "wherein when one of the gate lines

crosses associated ones of the lower-level pixel electrodes, one of the auxiliary capacitance lines, which is adjacent to the gate line, crosses associated ones of the conductive members” is not disclosed and shown in the elected species 8 of Figures 35-38. In fact, the disclosure regarding the embodiment 8 and Figure 35 disclose when one of the gate lines 2 crosses associated ones of the lower-level pixel electrodes 14B, one of the auxiliary capacitance lines 20, which is adjacent to the gate line, does not cross associated ones of the conductive members 9. Figure 35 shows the conductive member 9 extends from the lower-level pixel electrode 14B to function as a drain electrode and is far apart from the capacitance lines 20; therefore, the capacitance line 20 does not cross the conductive member 9 as claimed.
